

# Specification for graphics

## Dimensions

This section of the specification document contains the dimension resolution for the banners we need.

## Color scheme

The color scheme for the banner should be red, white and black so it fits the rest of our web application.

*Figure 1: An example of how the colors we work with could go together*

## Title banner on [index.html](#)

This section is related to the title banner we need on our index page. It serves as the banner/logo for the website and is used at the top of the page right below our navigation bootstrap header.

*Figure 2: example of title banner in terms of dimensions*

How many do we need of these?

We need 1 design.

## Dimension resolution

1000x150 (width x height)

Example of what we need

Figure 3: An example of what we imagine. The color scheme should be red and blue as dictated in the "color scheme" section.

### User profile banners

This section is related to the banners we need on our user profile page. They are used as headers for the different sections a user profile consist of.

Figure 4: example of user profile banner in terms of dimensions

How many do we need?

We need 4 in total, one each for:

1. About me
2. Follow list
3. My teams
4. My Pokémon

### Variations

All of them should have the same design, but the text on them should be different matching each section. So, we have 1 170x50 banner that says: "About me" and another that says "Follow list" and so on.

### Examples for inspiration

The follower graphics are an example of what we have in mind. Please note that the design should not resemble them. They are merely a demonstration of they will be used

Figure 5: Example of how we are going to use the user profile banners. The above is we have in mind, but with the appropriate text as written in the "how many do we need" section and in the color scheme given in the "color scheme chapter"

Dimension resolution

170x50 (width x height)

Pokémon mart banner

This section is related to the Pokémon mart banner that we need in our mart.html page.

*Figure 6: An example showing the dimensions we work with*

How many do we need

We need 1 of these.
